

## Home Tutoring arrangement

The customer approached us with a concept, seeking a straightforward desk setup for home tutoring and after-hours training for work, also simple to remove for functions.

### Customer Requirements

- Neat and Tidy
- Minimalist setup
- Apple Devices
- Remote Control of 2nd Device
- Wireless Keyboard & Mouse
- Ease to remove for evening parties and events.

We gladly assisted in implementing this organised arrangement, which consisted of two Apple mini PCs and two screens. This allowed the teacher, who is also the mother, to supervise her child's activities while simultaneously fulfilling her role as a marketing assistant through hybrid working. It is truly gratifying to witness the customer's satisfaction and the positive impact we have on their lives.

The PC was mounted under the table and all power cords were hidden away to ensure we met the customers requirements, the customer can simply unplug the screen and remove the keyboard and mouse to have an open table to use for other functions.

Remote control for the 2nd tutoring PC was done via a free remote control software that allowed the parent to simply minimise her work and show her child how to do something without stepping away from the desk, allowing the child to work comfortably and also offered an 2nd workstation for when colleges came to work on projects in a hybrid setup.
